Did you know...

...that you can take a sequence of statistics courses to partially fulfill a foreign language requirement?

Departments and Areas of Specialization which permit the use of a two-semester statistics course sequence in lieu of one foreign language do so in accordance with the Ph.D. Coordinating Committee policy.

Effective September 1998, acceptable courses in the Department Human Development (HUDM) are:

· HUDM 4122 Probability and Statistical Inference
· HUDM 5122 Applied Regression Analysis
· HUDM 5123 Experimental Design

A passing grade must be received for both courses. R credit is not acceptable.
