

CIFLTE PUBLIC TALK

EMERGENCE OF LANGUAGE STRUCTURE

SPEAKER:

Dr. Brian MacWhinney

Teresa Heinz Professor of Cognitive Psychology
Carnegie Mellon University

Teachers College
COLUMBIA UNIVERSITY

Center for International Foreign Language Teacher Education (CIFLTE)

The analysis of Emergentism, which views the emergence of structure as the result of the operation of competing processes or constraints across levels and timeframes, is illustrated through physical systems such as states of water, protein folding, and geologic formations. Using data from psycholinguistics, child language learning, sociolinguistics, language typology, second language learning, and multilingualism, the discussion explores how language structure arises over time from the interaction of competing pressures that operate at diverse timeframes (evolution, language change, memory, and learning) and linguistic levels (articulation, audition, lexicon, morphology, syntax).
