As the semester draws to a close, I think it is important that we take some time to reflect on what you have learned and how you have learned it here in math class. I take these very seriously and Patrick and I will take them into account as we plan the next marking period. What you say here **WILL NOT** affect your grade! You have a couple options for doing this.

1. Write a letter to a new student entering after the first semester. What should they expect from the class, the teacher and the math?

2. Do an interview with Becca in which you describe what math class is all about.

3. Draw a picture of math class. What makes it good? What makes it not so good? Make sure you write a couple sentences explaining your picture.

4. Write a rap. Tell me what went well for you in math class, and what you want to have happen differently. What did you learn in math?

5. Write me a letter explaining what worked for you about math class (the math, the teaching, and the classroom environment), and what didn’t work (the math, the teaching, and the classroom environment). Make sure you include some suggestions when you critique.
