INTERNATIONAL WORKSHOP ON ENVIRONMENT  
SUSTAINABILITY AND EDUCATION

---

## Discussing students' ecosophies thanks to science-fiction in Higher Education

---

LAURE KLOETZER

For the past four years, we have been teaching environmental psychology at Bachelor's level, with an original approach using science fiction writing and more precisely the protocols invented by the Zanzibar collective. This conference will examine this attempt from two complementary angles: on the one hand, from a pedagogical point of view: how can science fiction help us make students think about their own relationship with nature? On the other hand, from a scientific point of view: what do we learn through the dreamed or distressing worlds constructed by our students about their current relationship with nature?

**WEDNESDAY MARCH 16TH 2022**

**9:00AM - 10:30AM EST**

4pm/16:00

Tel Aviv

3pm/15:00

Berlin

10pm/22:00

Beijing
